

# **VERY IMPORTANT**

## **Proper Powering On And Off Sequence For Light Board**

**DO NOT** simply turn off the power strip.

**This is a computer!**

**Just switching off the power without going through the sequence below will possibly interfere with the normal function of the light board.**

### **Power ON**

1. Push the on button (upper right hand corner of board).
2. Once it has powered up, if you need you can go to the cue list screen. On the monitor in the lower left corner, you will see a triangle symbol. With the mouse press that to get to the cue list screen.

### **Power OFF**

1. Press "Go to cue" button
2. Press the "Out" button
3. Press the "Enter" button.
4. Wait for all of the lights to completely go to black.
5. On the monitor screen using the mouse, click the lower left triangle symbol.
6. A screen will come up. Double click on the "Power Off" option.
7. Click "OK" and the board will power off.

**If you are not sure how to achieve something with the board, do not experiment. ASK SOMEONE!**
